

The Case of the Bad Name

aka: The art of naming variables, constants, classes, methods and more...

Presented by: Adrian Gould / Sander Huijsen

The Appropriate Characters

- Use only the following

–Letters

- A to Z
- a to z

–Numbers

- 0 to 9

–Symbols

- – Minus
- _ Underscore
- . Full Stop

Lower Case

- Everything kept in lower case
- Ok for single words
- Not readable
 - the brain spends extra time to separate the words
- **everythinginlowercase**
- **counter**
- **totalage**
- **numberofpeople**

The Cases

Lower

Upper (Shouty)

Camel

Pascal

Snake

Shouty Snake

Kebab

WA

Lower Case

- Everything kept in lower case
- Ok for single words
- Not readable
 - the brain spends extra time to separate the words
- **everythinginlowercase**
- **counter**
- **totalage**
- **numberofpeople**

Upper Case

- Everything kept in upper case
- Ok for single words
- Usually used for "constants"
 - see Shouty Snake Case
- Not readable
 - the brain spends extra time to separate the words

- **EVERYTHINGINCAPITALS**
- **COUNTER**
- **TOTALAGE**
- **NUMBEROFPEOPLE**

Camel Case

- First word lowercase
 - Other words, capital first letter
 - Used by:
 - C#, PHP, etc for variables and functions
 - Readable
 - eye sees new word capital letter
 - Capital is a 'hump' or break
- **everythingInLowercase**
 - **counter**
 - **totalAge**
 - **numberOfPeople**

Pascal Case

- Capitalise first letter of every word
 - Extensively used in code:
 - Class naming
 - Properties
 - Method naming
 - And more
 - Readable
- **CapitaliseFirstLetters**
 - **Counter**
 - **TotalAge**
 - **NumberOfPeople**

Snake Case

- All words are lower case
 - Words separated by _
 - Python
 - naming variables
 - Methods/functions
 - Sometimes used in other languages
- `underline_separated`
 - `counter`
 - `total_age`
 - `number_of_people`

Shouty Snake Case

- All words Upper Case
 - Underscore separated words
 - Readable
 - As underscore splits words up
 - Common for constants
 - C#,
 - PHP,
 - C++
 - and other languages
- **UPPER_CASE_WORDS**
 - **COUNTER**
 - **TOTAL_AGE**
 - **NUMBER_OPF_PEOPLE**

Kebab Case

- Separate words with minus -
 - Usually used for:
 - file names
 - folder names
 - CSS Class names
 - CSS ID names
 - Cannot be used for variable names in many languages
- **kebab-case-sample**
 - **counter**
 - **total-age**
 - **number-of-people**
